

Transforming
your pool space

Pool-dek®
swimming pool infill

Elegant and stylish
hard floor pool
covering system

With and without covering

Convert from a wet to dry environment

Can fit around specific pool features

Introducing Pool-dek

Pool-dek is a pool covering system designed to convert your pool house, pool room or outdoor area, from a wet environment to a dry area, which can be used for events.

Transforming your space

Pool-dek comprises a bespoke, made to measure, stylish floor finish over the water's surface. The system utilises the existing space of a concrete shell or tiled finish swimming pool, covering it and producing an individual floor surface to create an amazing and unique additional event space. With installations worldwide, we will work with you, your architect, interior designer, pool contractor or project manager to create your perfect pool covering solution.

Simple transformation

- No need to drain the pool
- Average install time 2-4 hours
- Initial site survey and installation included*
- Supplied worldwide (survey and installation available)

*UK Only

Open up a completely new space

Designed to protect your pool

The Perfect Fit

Pool-dek is easy to install, dismantle and store, used in private houses and commercial premises for over 20 years.

How it works

Pool-dek is constructed using stainless steel frames with adjustable feet, ensuring that the framework is level and ready to accommodate the water resistant deck panels. Frames hook together without the need of tools and are braced to the pool side to provide a rigid substructure. We offer a bespoke design and installation service to the finest detail such as edging, corners and

special cutting requirements. We can also accommodate sloping floors, steps and jacuzzis.

A selection of high specification floor finishes is available to complement an existing colour and design scheme. See page 13 for examples.

Pool-dek Options

We offer two types of Pool-dek system, a 'flush fitting' system and an 'oversail' system. The flush fitting system consists of a brushed stainless steel edging, to lip over the poolside coping.

The oversail system will result in an edge finish that overlaps the edge of the pool, with a 24mm graduated lip in aluminium or teak.

Flush fitting system

Oversail system

Storage

Compact storage on wheeled trolleys is provided which will pass through a standard 800mm wide single doorway.

It is recommended that a suitable storage location is allocated, ideally on the same level as the pool area, in order that the storage trolleys can simply be wheeled out when required.

Key Features

Modular components

Portable frames and decks allow for easy handling and storage

Easy to install, dismantle and store

Sections simply connect together without the need to drain the pool

Compact storage

Storage trolleys can pass through a single doorway

Multi-functional

Creates a dual purpose room

Finish options

Floor finishes are available to complement individual spaces

Strong and secure

Robust construction ensures a safe and strong structure

High spec finishes

Aesthetically pleasing and durable

Worldwide installations

Over 20 years of experience installing worldwide from the UK to Qatar.

Total Project Management

Whether you are a project manager, private resident, pool contractor or architect, we will work with you during the Pool-dek installation process to create a bespoke design for any event.

From Pool to Party

The initial stage of the process will usually involve a site survey. After assessing your location, pool type and size, we will provide a quotation. All components are made to measure.
